Security Advisory 2024-031

High Severity Vulnerabilities in Cisco Products

March 29, 2024 — v1.0

TLP:CLEAR

History:

- 29/03/2024 — v1.0 – Initial publication

Summary

On March 27, 2024, Cisco released security updates for fourteen (14) vulnerabilities affecting IOS, IOS XE and Cisco Access Point software. Six (6) high severity vulnerabilities with a CVSS score of 8.6, could allow an unauthenticated, remote attacker to cause denial of service on an affected device [1].

Technical details

- **CVE-2024-20311**, an attacker could exploit this vulnerability by sending a crafted LISP packet to an affected device. A successful exploit could allow the attacker to cause the device to reload, resulting in a denial of service (DoS) condition [2].
- **CVE-2024-20314**, an attacker could exploit this vulnerability by sending certain IPv4 packets to an affected device. A successful exploit could allow the attacker to cause the device to exhaust CPU resources and stop processing traffic, resulting in a DoS condition [3].
- **CVE-2024-20307** and **CVE-2024-20308**, an attacker could exploit this vulnerability by sending crafted UDP packets to an affected system. A successful exploit could allow the attacker to cause the affected device to reload, resulting in a DoS condition [4].
- **CVE-2024-20259**, an attacker could exploit this vulnerability by sending a crafted DHCP request through an affected device. A successful exploit could allow the attacker to cause the device to reload, resulting in a DoS condition [5].
- **CVE-2024-20271**, an attacker could exploit this vulnerability by sending a crafted IPv4 packet either to or through an affected device. A successful exploit could allow the attacker to cause an affected device to reload unexpectedly, resulting in a DoS condition. To successfully exploit this vulnerability, the attacker does not need to be associated with the affected AP. This vulnerability cannot be exploited by sending IPv6 packets [6].
Affected Products

The complete list of affected products can be found on the vendor's website [1].
Cisco has released workarounds for the vulnerabilities CVE-2024-20307 and CVE-2024-20308 [4].

Recommendations

CERT-EU recommends updating to the latest version of the affected product as soon as possible to mitigate this vulnerability.
